Software Developer

Detail-oriented Software Developer with expertise in Python, API integration, and database management. Graduated in CSE (AI/ML) from New LJIET with top project grades. Excelled in fintech software development. Certified by IBM and Microsoft, skilled in machine learning and data analysis, eager to contribute in a collaborative environment.

PROFESSIONAL SUMMARY

- Strong Python programming skills applied in building multiple REST and GraphQL APIs, handling complex relationships (Product-Tax, Pricing Rules), and developing reusable microservices.
- Deep understanding of ***PayU modules - Issuance, Online Dispute Resolution (ODR), Onboarding, and Limit Management.***
- Supported launch of India's first Health & Wellness RuPay Prepaid Card by developing wrapper APIs for PayU card, wallet, transaction, and service workflows.
- Built Online Dispute Management (ODM) and Feedback modules with centralized backup and traceability across PayU and Nife systems.
- Designed flexible, multi-tenant PostgreSQL databases supporting Products, Taxes, Pricing Rules, Pricebooks, Party Products, and File Logging.
- Integrated advanced backend features including logging, token authentication, API key verification, and automated email notifications.

TECHNICAL SKILLS

- Programming: Python, JavaScript
- Backend & API Development: FastAPI, GraphQL, Node.js, Express, SQLAlchemy, Multitenancy Implementation
- Tools & Platforms: PyCharm, Jupyter Notebook, Flask, SQL, Postman, ` Code, Bitbucket, Jira, AWS S3, Vite
- Frontend & full stack : React, Vite, Tailwind CSS, data visualization (dashboard/charts), REST API integration
- Database Management**:** PostgreSQL, SQL (advanced CRUD, complex relationships, optimization), MongoDB, Mongoose
- Other: Automated Email Systems, Logging & Monitoring, Token-based Authentication, API Key Verification, Microservices Architecture

WORK EXPERIENCE (FTE: 2 Year)

Nife Card (Python Backend Developer) **2026 (Present)**

Nife Card offers a suite of financial solutions, including a range of prepaid debit and health care cards designed for seamless transactions and enhanced financial management. Their offerings include RuPay and PayU integrated cards, which provide versatile payment options and loyalty rewards. The platform emphasizes personalized customer experiences with features such as loyalty point systems, tiered rewards, and comprehensive tracking of spending and benefits. Nife Card focuses on delivering secure, efficient, and user-friendly financial products to meet diverse consumer needs, combining advanced technology with tailored financial solutions.

- Supported the launch of India's first *Health & Wellness RuPay Prepaid Card*.
- Utilized tools and technologies including ***Postman, PostgreSQL, VS Code, Python, Bitbucket, and Jira***.

[Loyalty Module]

- Spearheaded the implementation and handling of the ***loyalty module, assigning loyalty points to customers based on events such as referrals and purchases***.

[PayU integration]

- Implemented key functionalities including card management (***Get Physical Card, Link Card***), wallet operations ***(Fetch Wallet Limit***), transaction history (***Transaction Statement Inquiry, Statement Inquiry***), and customer service workflows (***Create/View Service Request, Retrieve Customer Data***).
- Developed ***wrapper APIs for the PayU*** Integration Module to enable seamless communication between internal systems and PayU APIs.

[ABHA integration]

- ***Developed a secure ABHA (Ayushman Bharat Health Account) integration service using FastAPI***, enabling users to enroll, authenticate, and manage digital health accounts in compliance with India's National Digital Health Mission (NDHM). Designed and implemented RESTful APIs for public key certificate generation, Aadhaar-based OTP enrollment, and ABHA profile management with ***dual-layer authentication (JWT and ABHA tokens)***. Implemented ***RSA encryption*** to securely transmit sensitive health and identity data, and built ***multi-tenant database operations*** using SQLAlchemy to support scalable, tenant-isolated access. Established comprehensive ***error handling, audit logging, and security controls*** to ensure reliable, compliant, and secure integration with national digital health infrastructure.

[Dispute & Feedback Management Modules]

- Developed an ***Online Dispute Management (ODM)*** module supporting both PayU and Nife's internal server, using a shared database architecture for unified dispute tracking and data consistency.
- Engineered a ***feedback module*** for Nife users, enabling streamlined feedback collection and centralized storage for analysis and action.
- Designed and implemented an ***automated email notification*** system to acknowledge dispute submissions and feedback, enhancing user communication and experience.

[Scalable Architecture]

- ***Implemented multitenancy*** across the Nife module for scalable architecture
- Designed flexible, ***multi-tenant database models to log system-generated and user-uploaded files with detailed metadata*** (versioning, security type, permissions, file path, etc.)
- Implemented ***centralized backup*** of all PayU and Nife disputes in Nife's database, ensuring a complete and reliable record for streamlined issue management.
- Designed and maintained database schemas using PostgreSQL, ensuring efficient data management.
- Developed robust logging, error handling, API key verification, and dynamic data filtering logic.

[Microservice Development]

- ***Designed and developed the Product microservice from scratch***, owning the complete end-to-end workflow including database schema design, service architecture, API contracts, and business logic implementation.
- Designed flexible, multi-tenant database models supporting ***Products, Taxes, Pricing Rules, Pricebooks***, and ***Party Products***, with full ***CRUD*** *and* ***filtering*** *APIs*.
- Designed and implemented an ***intelligent insurance recommendation system***, enabling product recommendations based on ***multiple user inputs and eligibility criteria*** (policy requirements, pricing, taxes, and rule combinations).
- Built robust GraphQL APIs with ***optimized queries, reusable schemas, and complex relationships*** (product–tax, product–pricing rules) to ensure high performance and scalability.

[Notification System]

- ***Designed and developed a complete notification system from scratch***, including event catalog, notification templates, template variables, and notification tracking modules.
- Architected a flexible, ***event-driven notification framework***, enabling dynamic message rendering using template variables across multiple notification types.
- Implemented secure storage and management of ***FCM tokens*** mapped with customer data, enabling reliable in-app notifications.
- ***Built the end-to-end workflow for in-app notifications***, fetching customer FCM tokens from the customer service/database and delivering real-time notifications triggered by system events.
- ***Ensured scalability and extensibility of the notification system***, allowing easy onboarding of new events, templates, and notification channels without code changes.

EDUCATION

BE in CSE(AI/ML), Gujarat Technical University, India **(CGPA : 7.6)** ***(2020 - 05/2024)***
